

GAME PRODUCER · LEAD GAME DESIGNER · HO CHI MINH CITY

Huynh Thanh Nghi

I take mobile F2P games from concept to launch and live ops — set the direction, plan the build, and use player data to decide what changes. **3 shipped titles, 3 genres, 10M+ combined downloads**, mainly for the Japanese market.

PHASES TO CLOSED BETA

44→73%

D1 RETENTION AFTER REDESIGN

7→9–10%

D30 AFTER LIVE REBALANCE

HOW I RAN PRODUCTION

- Team: 8 game design, 7 engineering, 4 art, 2 UI, 2 QA, 1 sound, 1 marketing, plus outsourced partners. Daily stand-ups, weekly syncs, milestone reviews.
- Plan: benchmark reverse-engineering → alpha → beta 1 → beta 2 → closed beta, tracked in Redmine, Google Sheets, Cacao and AI agents.
- **Scope call:** after alpha, building everything for launch — Guild vs Guild included — would have sunk the schedule. I cut GvG from launch and shipped it two weeks later: players explore PvE and PvP first, then compete harder, the same pacing our benchmarks and competitors use.
- **Product call:** test plays showed we were too close to our benchmarks, so we added new mechanics to make the game its own — worth the extra time.
- **Live-ops fix:** D30 sat at 7% against a 10–15% target. Players weren't out of content — late-game RNG made their training and purchases feel meaningless. I rebalanced RNG to matter most in evenly matched races and fade as the power gap grows, backed by win-back campaigns. D30 rose to 9–10%.

WHAT I DESIGNED

- Owned the two core features — training simulation and race animation — from benchmark research and GDD to UI wireframes and shipped build.

- Level design linking trained parameters and skills to race outcomes; balanced IAP packs and gacha lineups.
- Built the milestones and the post-launch operation calendar; led the design team through launch into live ops.

PROCESS HIGHLIGHT

- Spec'ed the training loop as a turn economy: five exercises feed five parameters, while goal, sub-goal and condition all compete for the same limited turns.
- Benchmarked *Uma Musume: Pretty Derby* and *Blue Lock: Project World Champion*, then decided which parameters drive stamina, speed and skill activation in a race. (Mapping under NDA.)
- Built an interaction legend into the wireframe — interactable / non-interactable / special boost — so UI, engineering and art read priority straight off the spec.
- Layout rule: everything one decision needs is visible without a tap; only depth sits behind a button.
- Between test plays: cut the training cycle by two-thirds and retuned goals — players were dropping out before the payoff. Faster progression let them discover more content. **D1 retention rose from 44% to 73%.**
- Wireframe → final: moved the race button so players stay on training until ready, and merged skill purchase into the skill-point display to cut competing controls.

Store screenshots – training loop, character development, road race

► Watch the gameplay video

WIREFRAME → SHIPPED SCREEN

Wireframe I authored – interaction legend built into the spec

The shipped screen – same hierarchy, IP art layered on top

LIVE-OPS CALENDAR & RACE MODEL – blurred under NDA

Operation calendar I built and ran – missions, events, ranking and gacha across a quarter

Part of the race model I designed – speed, acceleration, gradient and wind corrections

RESULT

90K+ downloads in the first month, 4.0+ store rating, and the highest paying-user ratio of any title enish has shipped. D1 retention 44% → 73% after the playtest redesign; D30 7% →

9–10% after the live rebalance. Further metrics under NDA — happy to walk through them in an interview.

09/2022 - 08/2025 · LIVE

De:Lithe Last Memories

ディライズ ラストメモリーズ — Roguelike action RPG (F2P / Web3)

ROLE	PERIOD	DOWNLOADS	SCOPE
Game Designer — Battle team lead	3 years	800K+	PvP · GvG · skills · stages

WHAT I DESIGNED

- Owned PvP and GvG end-to-end: GDD, development, launch and post-launch tuning.
- Level design for monsters, bosses and stages; character skills from concept to numbers and balancing.
- Tuned battle feel with engineers in the in-house action-command system; directed BGM/SE/voice.
- Shipped every stage, boss and skill on schedule — placing and managing the art, sound and voice orders for each one.

PROCESS HIGHLIGHT

- PvP and GvG were mine from blank page to live season — running continuously since December 2024.
- Builds that feel fair against monsters break player-versus-player, so each mode got its own arena and rule set instead of reusing PvE content.
- Designed 60+ stages around them — 32 main-story, 12 daily, a gold-farming stage, plus the two arenas — and the monsters, bosses and skills that fill them.
- Specced battle feel, then tuned it with engineers until the build matched — and directed sound so a skill *reads* as powerful, not just calculates as powerful.

Boss encounter – Red Wyvern raid battle

GvG objective battle – feature I owned from GDD to live

Combat, skill choice & equipment systems

DESIGN DOCUMENTS – text blurred under NDA

Stage design sheet – layout, monster placement and gimmick coverage, with the concept beside each stage

Skill sheet – attack range and motion sketched frame by frame, then specced for engineers and artists

RESULT

800K+ downloads since the June 2024 launch; the PvP / GvG seasons I owned have run continuously since December 2024. Detailed metrics under NDA — happy to walk through them in an interview.

02/2021 - 03/2022 · SERVICE ENDED

The Quintessential Quintuplets: Can't Divide the Puzzle Into Five

五等分の花嫁 五つ子ちゃんはパズルを五等分できない — Anime IP match puzzle

ROLE	DOWNLOADS	TEAM LED	SCOPE
Game Designer · Operator	9.2M	4 (VN office)	Events · gacha · level design

WHAT I DESIGNED

- Ran the live-ops pipeline — event puzzles, gacha, campaigns — leading the 4-person Vietnam team.
- Designed event puzzle levels and iterated on them with live KPI data (DAU, ARPPU).
- Shipped UI/UX improvements from reference to release; wrote official release notes in Japanese.

PROCESS HIGHLIGHT

- Held a fixed rhythm for 13 months with no missed release dates: an event every two weeks, a campaign with a new or improved feature every quarter.
- Standardised the pipeline — idea → puzzle set → master data → Japanese release note — and staggered it so two events were always in flight.
- Set difficulty from the previous event's data: clear speed, and how many players finished at all.
- The quarterly slot produced the “Cooking Raiha” idle-cooking system ([feature video](#)) — event materials got somewhere to go, so missing an event no longer meant nothing to come back for.

Event puzzle stage — level design I shipped in live ops

EVENT ASSET ORDER SHEET — text blurred under NDA

One row per asset – brief, reference, approved final. The sheet the JP art side and the VN team worked from every two weeks

RESULT

9.2M downloads. An event every two weeks and a quarterly feature update, held for 13 months by the 4-person team I led. Detailed metrics under NDA — happy to walk through them in an interview.

05/2025 - 09/2025 · PUBLISHED ON ITCH.IO

Latte Night — personal project

ROLE

Game Designer (team of 2)

LINK

hatching-chickens.itch.io/latte-night

- Defined core gameplay, art concept and story; designed the stage, monster behaviour, controls and lighting from prototype to published build.
- Zero to shipped with a 2-person team — scoped, built and published without a studio pipeline.

In-game – light as the core survival resource

Concept references – story, art, platform & gameplay pillars

Monster AI (ref [R.E.P.O](#))

Monster behaviour WITHOUT encounter

- After spawning for a period of time, the monster will despawn and respawn in **another random position B**
- Monster spawning position **shall not be too close** to the player (adjustable by configs) **B**
- Time to despawn will **be lengthen** with the played time (meaning the monster will be around longer if player cannot finish the stage early) and player's progress **B**
- Time to respawn shall **be shorten** with the played time and player's progress **B**
- Intervals between wander and idle shall range **from min ~ max** (Ex: wander around for 1~2 min then idle for 5~10s) **A**

Monster AI behavior design (wander / idle / despawn cycle)

► [Play Latte Night on itch.io](#)

03/2025 · PROTOTYPE

Light Escape — solo 4-hour prototype

ROLE	ENGINE	TIME BOX	ROUND
Solo — design & build	Unity	4 hours	5-minute survival

WHAT I DESIGNED

- Picked the constraint first: one light zone alive at a time, so safety is temporary and the player can never settle. Every other rule serves that one.
- Wrote difficulty as numbers: light cycle 10s → 3s over 180s, ghost 2.5 → 5.5 m/s against a 6.0 sprint, stamina making sprint a spend — early game survivable on reflex, late game only by planning.
- Split each cycle 70/30 into stable and warning phases, so difficulty lives in *when* the player commits, not in guessing where to run.
- Removed unfair losses: nothing starts until the player reaches the first light, and a loss needs 0.3s of continuous contact — a graze is not a death.
- Scoped it to 4 hours solo: one room, no NavMesh, placeholder assets. Choosing what to cut was the exercise.

Active light zone, timer, stamina – the entire UI the game needs

Quality & IP Management 品質管理

“Doesn't look like them.” “Old-fashioned.” “Not attractive.” — vague IP feedback stalls art for weeks. I wrote a review standard that turns it into criteria art and the IP holder can check at rough stage.

GACHA ILLUSTRATION QUALITY STANDARD

- **Four gates, not a score:** identity (it's really them), character (it's like them), ownership (“I want this one”), modern appeal (holds up next to today's top gacha). A card passes only when all four do.
- **“Similar” made checkable:** face shape, eyes, fringe, silhouette, build, expression, posture — shape match + acting match.
- **“Modern” made relative:** keep the IP's character design, update camera, light, depth and eye flow against a benchmark set refreshed every quarter.

- “Attractive” made a spec: each order carries one sentence defining the moment fans will want to own.
- Agreed through meetings with the IP holder — approvals stopped blocking releases. Written with AI assistance for structure and Japanese review.

アニメ IP 運営型 F2P ゲーム ガチャキャラクターイラスト 品質定義・レビュー基準

ラフ段階で「似ている・今風・魅力的」を判定するための実務ガイド

目的

感覚的なフィードバックである「似てない」「古臭い」「魅力的じゃない」を、制作前とラフ段階で判定できる評価基準へ変換する。

1. 結論

定義

原作ファンが一目で「本人だ」と認識でき、そのキャラクターらしい新しい魅力を感じ、「この一枚を手に入れたい」と思える、現在の市場水準に達した商品ビジュアル。

品質は「本人性」「キャラクター性」「所有欲」「現代的商品性」の4軸で評価する。

軸	定義	ユーザーの反応
本人性	原作のキャラクター本人に見える	「〇〇だ」
キャラクター性	性格・関係性・世界観に合っている	「〇〇らしい」
所有欲	普段とは違う価値のある瞬間になっている	「これ欲しい」
現代的商品性	現在の高品質ガチャと並べても見劣りしない	「豪華」「新しい」

形状一致 + 演技一致 = 本人性

4. 「今風」の定義

「今風」は原作の絵柄を別の流行絵に変えることではない。キャラクターデザインはIPに寄せ、構図・カメラ・光・奥行き・密度などの「見せ方」を現行市場へ合わせる。

古く感じやすい状態	現代的な見せ方
正面から立っているだけ	身体の動きに明確な方向性がある
カメラが常に視線の高さ	アオリ・俯瞰・近接など意図のある画角
人物と背景が平面的	前景・人物・背景で奥行きを作る
全体が同じ密度	見せたい場所へ情報量を集中する
中央に人物を置いただけ	視線誘導が設計されている
左右対称で静的	シルエットにリズムと方向性がある
背景が単なる装飾	背景が感情や物語を補強する
汎用的なポーズ	そのキャラクター固有の瞬間を切り取る

市場ベンチマークは固定しない。直近12か月程度の高評価タイトル・同ジャンル・同ターゲットから参考画像を集め、四半期ごとに更新する。「今風」は絶対値ではなく、市場との相対評価である。

5. 「魅力的」の定義

定義

「かわいい」「かっこいい」ではなく、「このキャラクターの、この瞬間を所有したい」と思えること。

ラフ制作前に、今回このキャラクターを好きな人へ何を見せるのかを一文で定義する。これを「魅力の設計文」として発注仕様へ入れる。

- 普段は強気なキャラクターが、主人公にだけ見せる一瞬の照れ。
- 普段冷静なキャラクターが、本気の戦闘で初めて感情をむき出しにする瞬間。
- 仲間を守るために前へ立つ、このキャラクターの最も頼もしい姿。

「夏なので水着」「周年なので豪華衣装」だけでは商材価値の定義として弱い。衣装や季節は題材であり、ユーザーが欲しくなる理由はキャラクターの感情・関係性・物語上の価値に置く。

アニメIP運営型F2Pゲーム-ガチャキャラクターイラスト品質定義・レビュー基準

AI in My Workflow AI活用

I build AI agents for my team, because how fast a team iterates matters as much as what it ships.

Quality

A daily bug-check agent scans master data and code against the operation schedule. QA's routine check dropped to **under 10 minutes a day**, freeing them for functional and event testing.

Master data

An agent reads level-design docs — rates, rewards, quantities — and enters the data itself. We only review. Doc-to-data mismatches went to **zero**.

Docs & planning

Project agents keep every GDD and level-design doc on one format and rule set, so documents never contradict each other. They also review docs, draft event schedules, progress reports and meeting notes, and polish JP business correspondence with the IP holder.

Game Teardown ゲーム分析

Blue Lock: Project World Champion — why it works, where it loses players, and what I'd change as its producer.

What works

Character design and VFX make every player look like a star. The spectacle is the reason to pull, and it lands.

What breaks

The UX isn't friendly to new players. As a player I couldn't tell where exchange items come from, how the championship works, or how to enter it.

What I'd change

- A “where to get” link on every exchange item.
- A guided first championship with a clear entry flow.
- Track drop-off on those screens to confirm the fix.

What I Bring 強み

For a new title, from first benchmark to live ops.

Product direction & production

Benchmark and competitor research, core-loop direction, milestone planning, scope calls, and daily rituals that keep a cross-functional team shipping.

Data-driven live ops

Playtest iteration, KPI analysis (DAU, ARPPU, D1/D7/D30), gacha and IAP planning, operation calendars and win-back campaigns.

JP ↔ VN / EN bridge

Trilingual communication with IP holders, partners and teams — spec translation, interpretation and cross-cultural coordination. JLPT N1, TOEIC 970.

About 自己紹介

I came to games from an unusual road — a Japanese Law degree, then language school in Japan. Law taught me to read dense material closely, find the rule underneath it, and argue from evidence rather than instinct — the same muscle behind benchmark research, GDD writing, and reading KPI data before touching a number.

Every genre I've shipped in — match puzzle, action RPG, training sim — I learned from zero. Breaking an unfamiliar domain down and turning it into a spec other people can build from is what I do fastest. Japanese, Vietnamese and English are how I gather that information, not the whole of what I bring.

Five years at enish took me from operating events on a 9.2M-download puzzle game to leading a 26-person team on a new IP title from concept through launch and live ops.

I play widely, too — 348 hours in *Umamusume: Pretty Derby*, plus *Blue Lock: Project World Champion*, *Dark War Survival*, *Arena of Valor*, *Cult of the Lamb*, *Sea of Stars*, *Little Nightmares*, *God of War*, *The Last of Us* and *Horizon*.

Long-term goal: to ship a game the world knows as **made in Vietnam, led by a woman**.

Languages & Recognition
